## teenage engineering release grip car.

grip car is an aluminum car with rubber wheels created by our good friend, danish designer anders hermansen.

grab onto the frame and go for a drive. innovative mechanics allow 360° rotation and ensures all four wheels stay grounded, ready to conquer its proximal terrain.

grip car is operated by simply gripping onto the body of the car, then pushing it forwards or backwards, round-and-round, up and over. the unique mechanical construction allows grip car to move freely in any direction. created by and for the ones who cherish the art of play.

all parts are made with cnc machining using robust aluminum 6063-T6, stainless steel, smooth bearings, and rubber tires. the finish varies between colors: a fast, glossy finish is applied to the red grip car, with black and aluminum versions in matte.

### tech specs

- cnc aluminum 6063-T6
- finish: glossy red, matte black and matte aluminum.

dimensions: 250 x 190 x 80 mm /  
9.84" x 7.48" x 3.14"  
weight: 980g / 2.16 lbs

### about teenage engineering

teenage engineering is developing the alternative future of consumer electronics, each invention designed to last. from reimagining music-making with the iconic OP-1 portable synthesizer and growing the synth population with the affordable pocket operator series, to rethinking listening with the OD-11 ortho directional speaker and the OB-4 magic radio, they have applied their signature mindset to a new legacy of enduring technologies. their creations have attracted collaborations with well-known artists and brands, sharing in their vision to integrate creativity into the everyday. teenage engineering was founded in 2007 and is based in stockholm, sweden.
