

TeamSphere

by Chris Tille

TeamSphere - An innovative art concept for business events.

TeamSphere is a revolutionary concept that harnesses the energy of event participants to create unique works of art while enhancing the dynamism and sustainability of events. Unique in the world, TeamSphere combines the expertise of a renowned artist with state-of-the-art technology and the spirit of the event participants.

This innovative approach creates a unique work of art at every event that captures the energy and dynamism of the participants. It can either be given away as a valuable memento or permanently placed in the office to immortalize the creative energy and meaning of the event for the long term.

Using a GDV (Gas Discharge Visualization) device and proprietary technology, the energy during an event is measured and analyzed. Chris Tille, a renowned artist and one of 99 award-winning Blue Chip Artists worldwide, is leading the project. His creative vision and expertise transform the abstract data into fascinating images.

The resulting image serves as a unique memento of the event and embodies the shared mood, motivation and team spirit of the participants. The collective art form serves not only as a memento, but also as an inspirational source to carry forward and reinforce the shared goals and messages of the event.

A transformative experience.

TeamSphere offers a unique experience where participants experience an innovative fusion of art, science and business. This unique art form captures the collective mood of the participants in an extraordinary way, creating an exclusive memory.

The resulting image embodies the collective mood and team spirit of the event and serves as a long-term source of inspiration. It is a lasting reminder of the shared goals and messages of the event.

TeamSphere is not just an art project, but a transformative experience that turns events into unforgettable moments and inspires and motivates participants in the long term.

Procedure:

During the event, measurement cycles are carried out in the background that do not interfere with the process. The collected data is analyzed overnight and presented the next day in the form of a picture. Each participant receives a hand-signed fine art print as a personal memento.

In addition, a large-format picture can be created according to the customer's individual wishes and displayed in the office or in a prominent location as a permanent memento.

TeamSphere offers participants an intense artistic experience and a lasting memory of the collective spirit and the inspiring combination of science and art.

TeamSphere as a permanent work of art in the office environment.

TeamSphere not only creates a temporary event experience, but a permanent work of art that enriches the office environment in the long term. This team-generated art captures the energy and dynamism of the participants for eternity.

Placed in the office, the artwork serves as a constant reminder of the shared experiences and successes. It symbolizes the creative processes and collaboration of the team and acts as a source of inspiration, reminding us of common goals and values.

The permanent presence of TeamSphere in the office captures the special dynamic and energy of the team and promotes a motivating atmosphere in the working environment.

TeamSphere

by Chris Tille

The artist and inventor of TeamSphere.

Chris Tille works at the intersection of science and art. Trained as a classical photographer in Innsbruck, Austria, he now uses photography, installation and sculpture as a means of visualizing complex data sets to make scientific principles and discoveries more accessible and meaningful.

His series use data from a variety of research fields as a starting point, which he then interprets, remixes as different sensory experiences and meticulously reconstructs to make the information accessible to the public again in mostly larger-than-life objects and works.

Milestones

-> **The world's first artist to visualize the Big Bang based on data from the Max Planck Institute.**

-> **FAZ VOR:DENKER 2023**

-> **One of 99 future Blue Chip Artists worldwide // 2022 and 2024.**

-> **Artist in Focus - London // 2022**
