

Urban Sensuality

Daniela Contreras

Neha Kulkarni

Raul Vela

Our installation brings care into Houston’s urban environment by assisting the community to learn, interact, and have exciting discoveries. With webs we can bring in play and ergonomic aspects into the already existing concrete jungle.

Project Concept

Mentor Inspired Drawing

Mentor Research Collage

"I am more interested in creating places similar to the ones found in nature and integrating them within architecture. I always derive inspiration from forests, trees, and water in nature. In addition to them, natural phenomena such as wind and clouds also inspire my designs."(TI) "In actions involving more public engagement, information, rewards, and decision-making capabilities are shared with participants, so they can make decisions to resolve future problems and improve their surroundings."(Izakun) "We know that people will likely spend very little time with our installations and we need to capture their attention to engage them in the topic. We use bright colors and engaging aesthetics in the hopes of coaxing them to stay a little longer."(TAKK).

Our Space Through The Words of
Our Mentors

Model

Ergonomics is a design factor that helps people adapt to spaces more comfortably, efficiently, and effectively.
