

Theme : Water

A large inflatable water pit with projections on the water surface and cocoon-shaped projection on the walls.

The three states of water's life cycle: solid, liquid, and gas (dry ice/haze machine). The physical elements are the water in the pool and dry ice, while the specific forms of water are displayed through projections

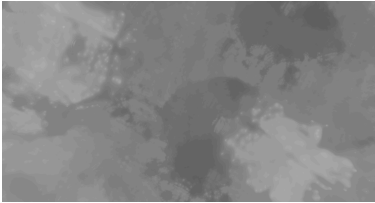

A camera creates a mirror effect on the back wall(far end)

Thesis:

Alchemy, Equivalent Exchange: To gain something, one must exchange it for something of equal value. If the cost isn't enough, parts of oneself (like a body part, memories, etc.) may be taken as compensation. Human transmutation is forbidden, yet some still attempt it. The backlash consumes the body, leading to the experiment's failure.

Breaking down and restructuring molecular structures, transforming water to various forms of energy.
