Ergonomics is the understanding and adaptations to fit the human body.

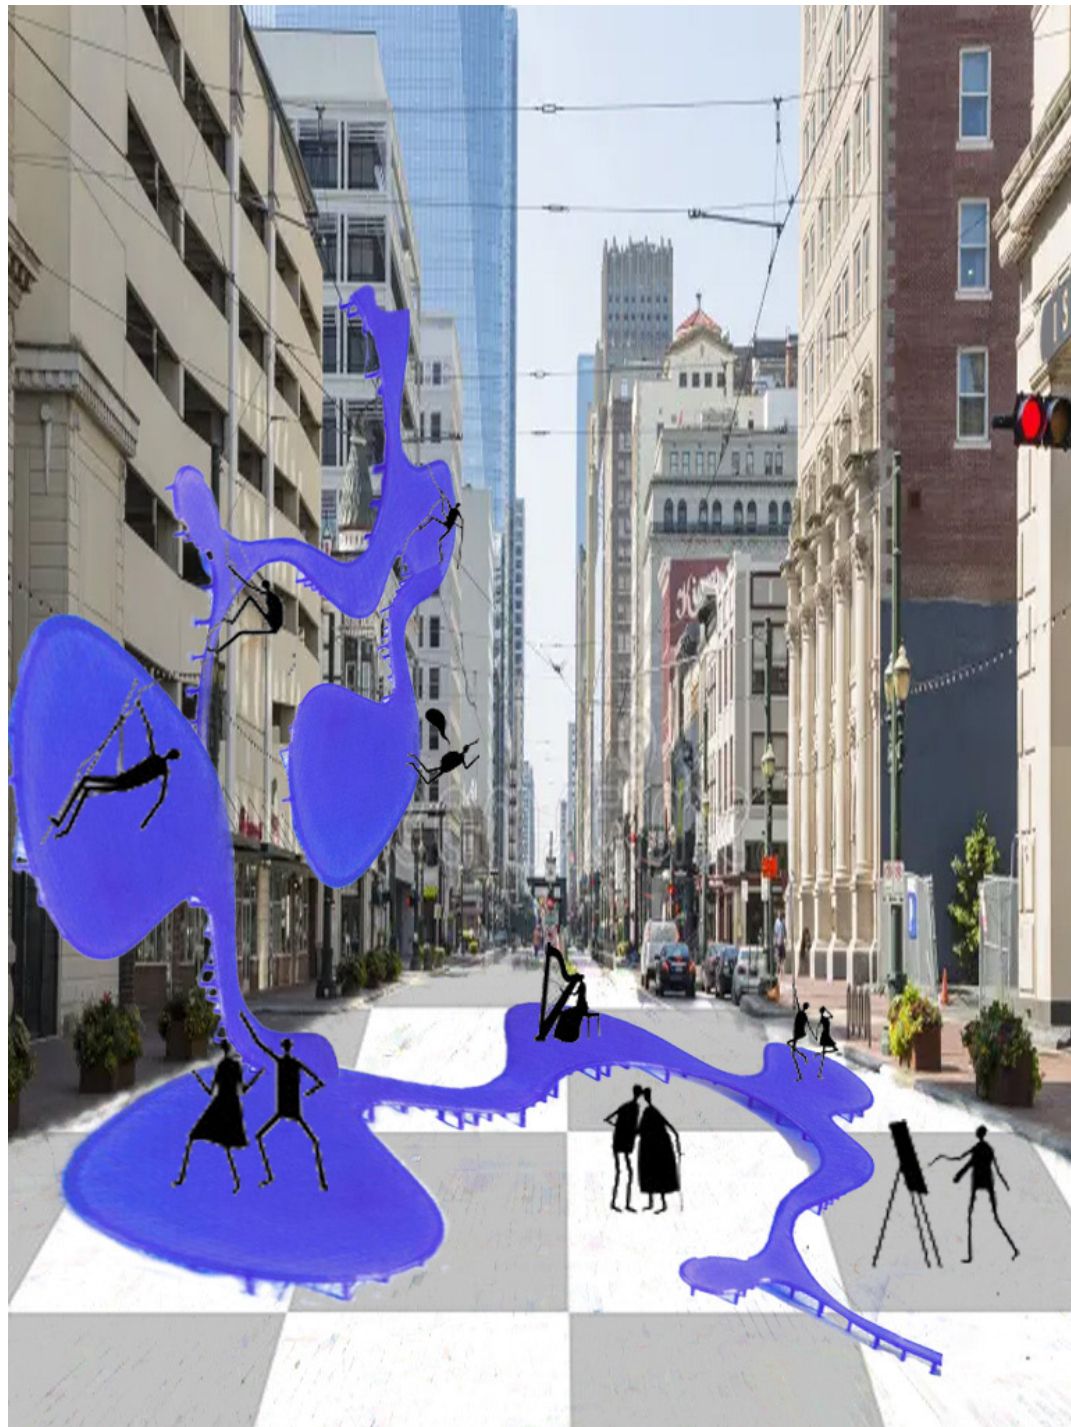

Ergonomics

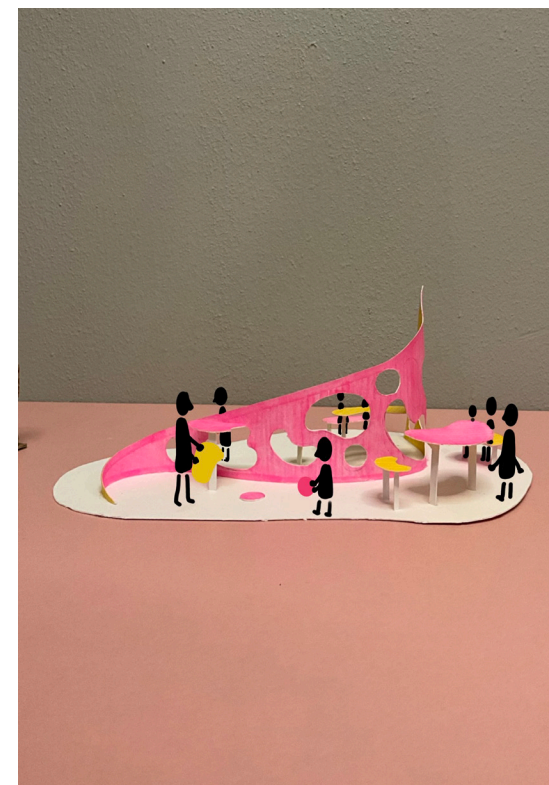

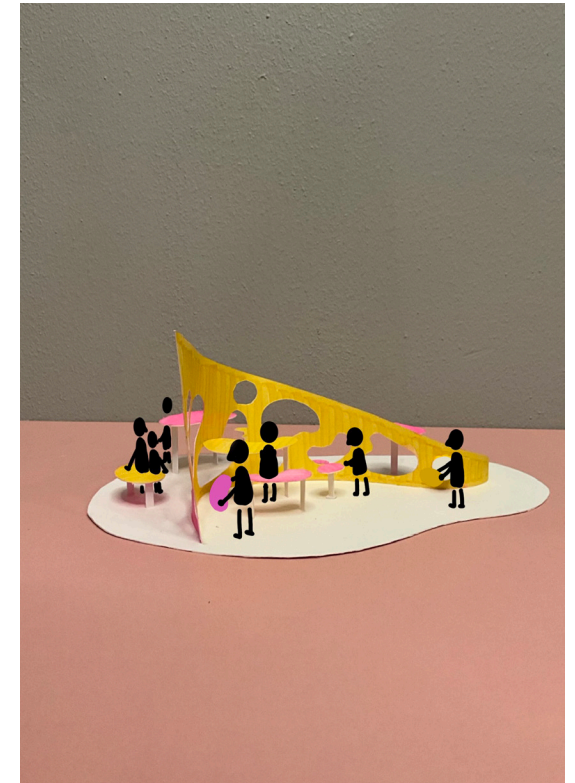

Concept Exploration

Urban Salon Program

Every location has a different context, making every project an adventure through which one reveals the hidden qualities of the space (Moriyama, Interview, 2023). The starting point of the entire project is to improve our community life and foster a more connected and inclusive society (Concentrico, interview, 2024). For us, applying curtains to the project can offer a simple and fun gesture that becomes an integral part of the space, creating a wall that is at once soft and transparent, but also thick (Moriyama, Interview, 2023). The main purpose of our work is to provoke people into using their imagination and make their surroundings more exciting (Panton, Interview, Date Unknown). We can stimulate imagination and excitement by setting up endless combinations by playing with size, shape and color (Clap Studio, Weareclap.com, 2022). To find the balance is a process, we try to play with these combinations in different places and in different ways (Clap Studio, Weareclap.com, 2022). These combinations are a conscious decision as they have a significant meaning and a function and contribute to set the atmosphere of our space (Panton, Darc magazine, 2020). Our project aims to give sensations to people who visit and the feeling of belonging to a place (Concentrico, Interview, 2024).
