

BIKE FRAME BAG - Bike Measuring Guide

STEP 1: Choose a long focal length on your phone camera to capture the entire bicycle. Using a focal length of 70mm or more is more accurate. Make sure to keep the bicycle's side as vertical to the lens as possible.

STEP 2: Use a tape measure or flexible ruler to measure the distance between the inside of the seat tube and the inside of the head tube along the bottom of the top tube.
