ORGANIC ABSTRACT UNEXPECTED

HOMA is a contemporary design atelier based in *Vienna* and *Istanbul* which specializes in mirrors, lighting, home interior objects, and furniture created through the use of multidisciplinary techniques and materials.

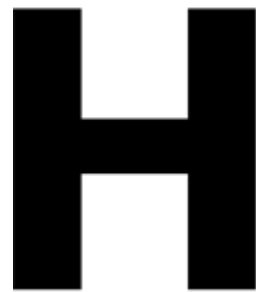

The atelier's trademark processes are handblown glass, glass fusing, and mirroring. Over time, HOMA has acquired unique expertise in mirror design by meticulous research and experimentation, thus elevating an object of function to the status of art.

**A MOMENTARY
ALCHEMY WHERE
TRANSPARENCY
BECOMES REFLECTION**

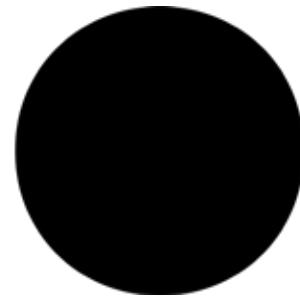

Handcraft

HOMA has discovered one of the last remaining masters of handcrafted mirroring in the Eastern Mediterranean. The atelier is original in its simultaneous use of different techniques to create organic and flowing mirror shapes. Each piece celebrates reflection, translucency, movement, light, time, multiple layering and spontaneity.

Object

HOMA's pieces are an exploration of organic, abstract, unexpected flowing lines and shapes. Our design service offer is presented in a catalog of over 80 designs in fluid and geometric shapes achieved through multidisciplinary techniques.

Materiality

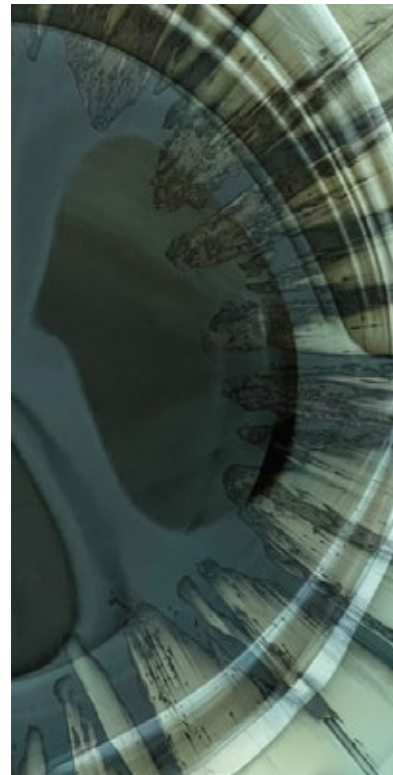

Through the use of mixed textures and the layering of mirror elements, unexpected effects are created on glass, which play with one's visual perception as well as the surrounding space. HOMA offers a vast library of materials. Glass, stone, marble, brass mirror techniques, bronze, wood, and clay are only some of the earth's materials that find their way into HOMA's products.

Architecture

Formally trained in interior architecture, HOMA founder Tuğba Koç has transformed her knowledge and experience into design objects of complex aesthetics. Now, together with a team of designers and artisans, Tuğba applies her hands on interior and exterior objects in a workshop environment enriching earth-derived, breathing, living materials. HOMA's interior objects are informed by art and driven by the philosophy that nothing artificial should be allowed to interfere with the energy of one's living environment.

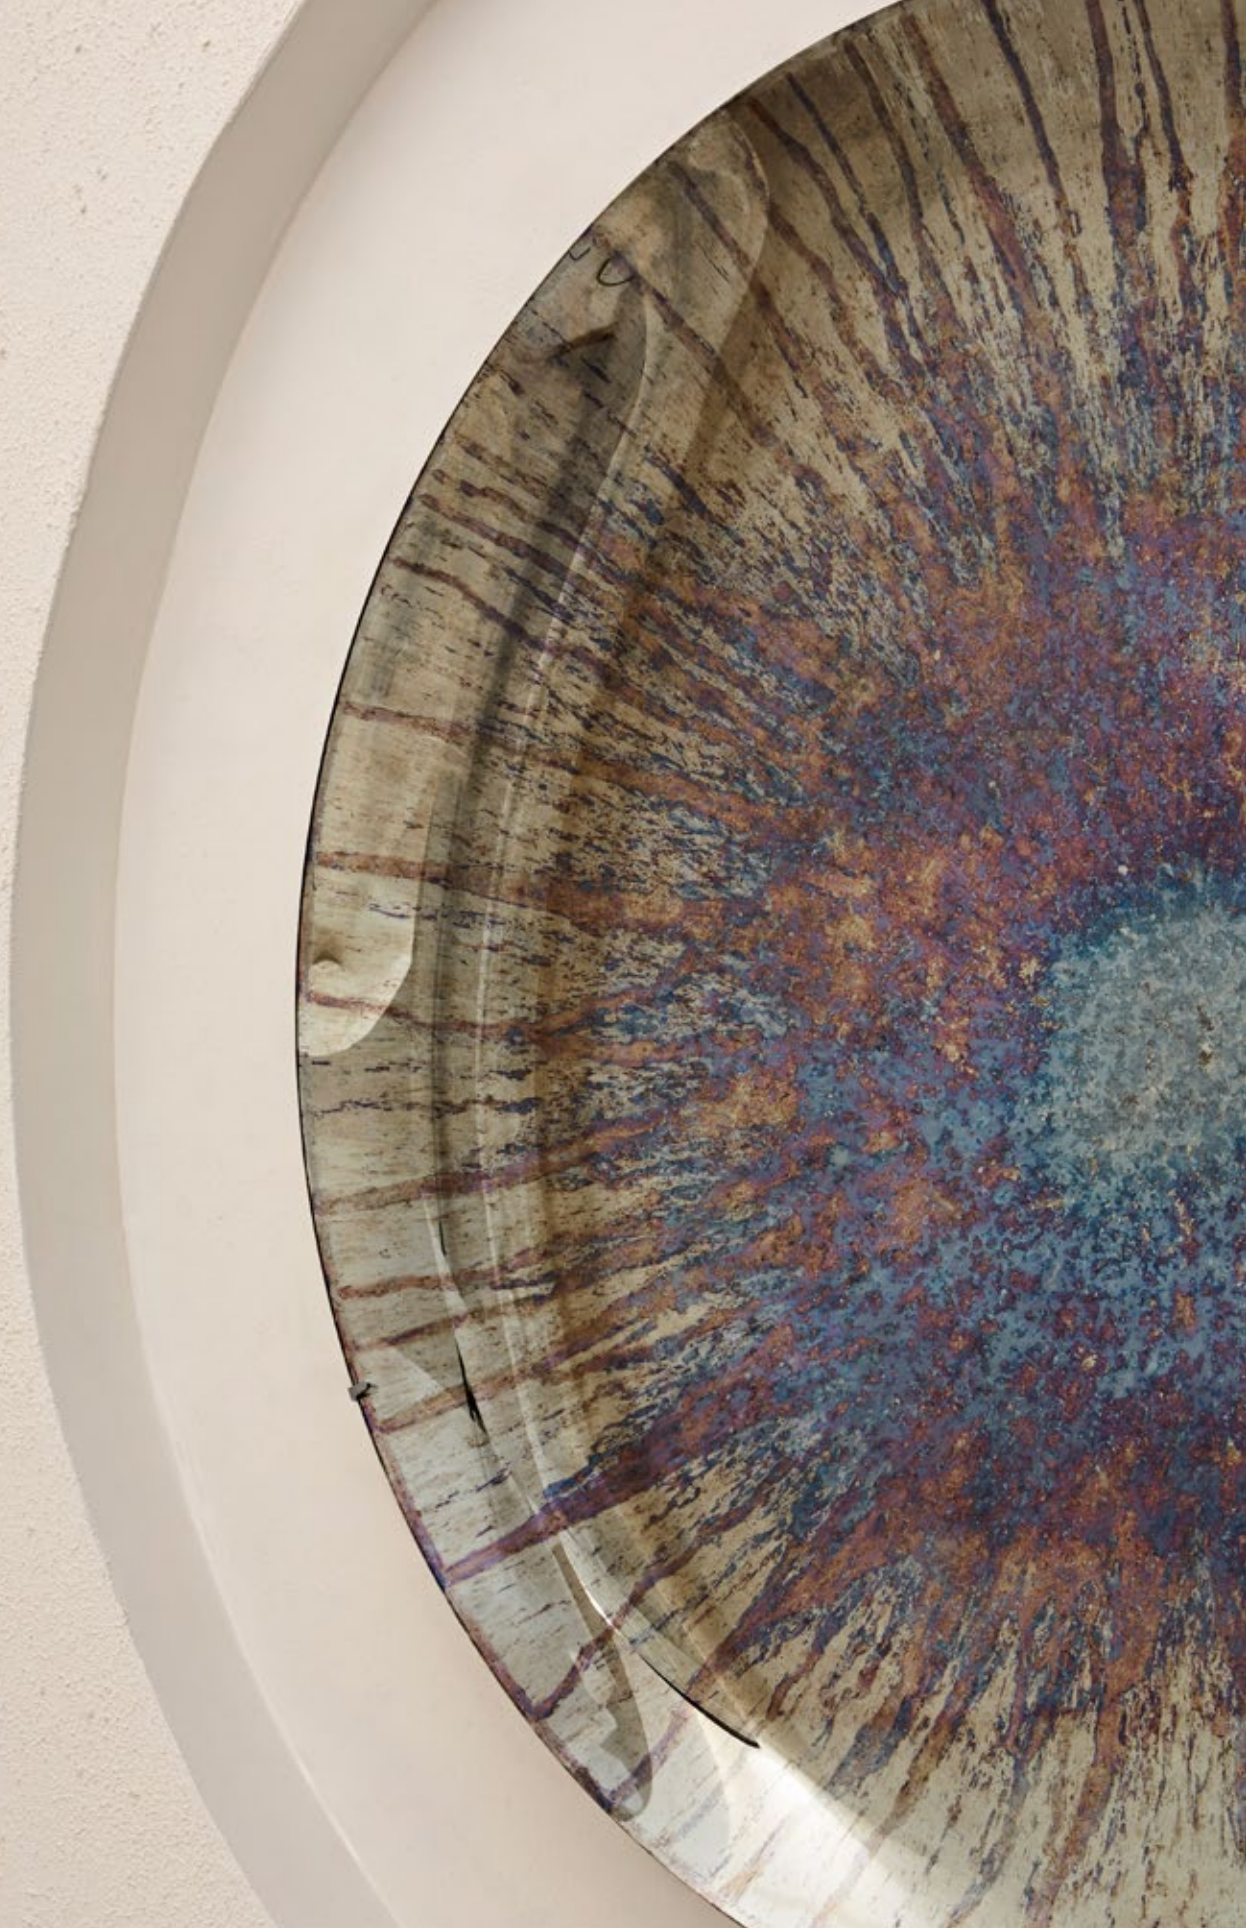

Remarkable combinations of components from a wide variety of sources have inspired the creation of our art. Various techniques in glass and mirroring add a unique touch to our designs and explore the limits of how far we can manipulate the material.
