teenage engineering introduces field desk, the official workspace of teenage engineering.

teenage engineering love to build new things, and with an office made up of people doing a variety of tasks, they decided to create their own modular work environment from scratch. now they're sharing it with you.

field desk is made from only what's needed and nothing it doesn't. all rails and clamps are produced by scandinavian manufacturer Hydro, using their engineering grade, 75% recycled aluminum. the desktop is crafted from double-sided formica birch plywood, so if the surface appears worn over time, it can be turned over for a fresh look. lightweight and modular, field desk arrives flat-packed to build in place, simple to assemble and disassemble.

made to adapt to your needs as your tasks and work environment change, field desk can be combined with accessories, like the custom storage tray and tape holder (available soon), or you can latch on your own creations using m5 screws.

field rail system

field desk is the first release in an integrated range of components called field rail system. an ongoing project, it's an open-ended system of interconnecting aluminum rails that enable the creation of customizable modular furniture and accessories.

this system also allows teenage engineering to offer custom-engineered interior solutions for professional workspaces, contact order@teenage.engineering with requests.

field desk dimensions:
width: 1195mm / 47"
depth: 770mm / 30.5"
height: 750mm / 30"

about teenage engineering

teenage engineering is developing the alternative future of consumer electronics, each invention designed to last. from reimagining music-making with the iconic OP-1 portable synthesizer and growing the synth population with the affordable pocket operator series, to rethinking listening with the OD-11 ortho directional speaker and the OB-4 magic radio, they have applied their signature mindset to a new legacy of enduring technologies. their creations have attracted collaborations with well-known artists and brands, sharing in their vision to integrate creativity into the everyday. teenage engineering was founded in 2007 and is based in stockholm, sweden.
