### Marcel Zaes

# In Idle Mode (Noise)

Sound Installation

with an ensemble of recorded opera singers, a Max algorithm, horn speakers distributed in space, and a field recording from the Shunde fishpond

copyright 2022 by Marcel Zaes composed in Shenzhen, China

#### Notes for Opera Singers

Produce tone with a lot of air, open mouth, and on a very constant 'hhhhhh' sound.

Keep the breathing rests as short as possible; breath very smoothly and inaudibly.

All notes lower than your singing range should be sung as low as possible on a different pitch.

Sotto voce – "below the voice" (not publicly, but sing privately, for yourself).

Sing this melody in a rough, sketchy, and smooth way. Blur the tones. No need to be precise.

Soft and careful.

Non vibrato.

#### Notes for Max algorithm

Each voice is recorded separately

The recordings are then subjected to the algorithm which remixes the reorded voices temporally as well as distributes them in space, so to ever produce new combinations.

What appears hear as a choral full score, in reality, is the fundation for an algorithm that plays the voices in an order different from the one notated here.
